Portfolio: shrutik-dawane

Backend engineer with about 1 year 8 months of experience building production data pipelines, search APIs, and LLM workflows in Python. Owned a Temporal-orchestrated ingestion pipeline and a search backend over 18M documents (Qdrant, OpenSearch, FastAPI).

EXPERIENCE

Python Backend Engineer — **Mumbai, India**
ALL MR ONLINE • Legal Tech — *Mar 2025 – Nov 2026*

- Owned an end-to-end Temporal pipeline for daily Supreme Court judgment ingestion: Selenium collection, VLM CAPTCHA solving, LLM metadata and headnote extraction, embeddings, and storage in Qdrant, OpenSearch, and S3, with duplicate checks so only new judgments are processed.
- Built the backend search API for Lexabase: query embeddings (RAG) and retrieval over 18M documents in Qdrant, with downstream LLM workflows for legal analysis.
- Built Python/Selenium scrapers for all 25 Indian High Courts, downloading publicly available judgment PDFs (CAPTCHAs captured with Pillow and solved by vision-model inference), with retry-and-alert handling and throttling (10 down-loads/min) to avoid IP blocks, feeding a corpus of 20M+ judgments.
- Built secured REST services across multiple servers (Nginx reverse proxy, bearer-token auth), including CPU PyTorch embedding inference and JSON validation before ingestion. Deployed and operated them on Ubuntu with Nginx, cron, and Git.
- Ran Qwen and DeepSeek on self-hosted vLLM (rented GPU instances) to extract and structure metadata from 75 years of High Court and Supreme Court judgments.
- Built Flask automation scripts and internal LLM tools that reduced repetitive document processing by 70%.
- Developed automation scripts for 3 production-based products in python and streamlit that reduced the workload by 90%

PROJECTS

Dbplorg.com (Freelance library website – FastAPI, MongoDB, React)

- Independently built and delivered a full-stack library website for a paying client, with a React frontend and a FastAPI/MongoDB backend for admin-managed books, events, and content.

Flinkoo (YC 2025 application) – python, llm inferences, pandas

- Built a prototype AI finance application and applied to YC 2025.

TECHNICAL SKILLS

Languages: Python · Go · JavaScript
Frameworks: FastAPI · Flask · Temporal · Gin
AI & ML: vLLM · RAG · Embeddings · PyTorch · scikit-learn · Pandas
Databases & Search: MongoDB · MySQL · Qdrant · OpenSearch · Elasticsearch
Tools & Infra: Git · Docker · Nginx · Linux · S3 · Selenium · Postman

EDUCATION

University of Mumbai — **Mumbai, India**
Master of Computer Applications (MCA) — *Nov 2022 – May 2024*

- **Coursework**: Machine Learning, Data Structures, Computer Networks, DBMS, OOPS, Operating Systems, Cloud Computing
