PROFESSIONAL SUMMARY

Backend Python Engineer with hands-on startup experience building data pipelines and LLM-based backend systems. Work spans large-scale document scraping, PDF processing, RAG pipeline development, Elasticsearch data workflows, and self-hosted LLM inference on GPU infrastructure. Used to owning backend features end to end with minimal oversight.

SKILLS

Languages: Python, Go

Backend: FastAPI, Flask, REST APIs, GraphQL

LLM Systems: Claude, Gemini, LLaMA, Qwen, RAG pipelines

Vector & Inference: ChromaDB, vLLM

Databases & Search: Elasticsearch, MongoDB, MySQL

Data & Scraping: Pandas, Selenium

Infra: Vast.ai GPU deployment, Linux/Ubuntu(SSH)

Tools: Git, cURL, Claude Code, OpenCode CLI, Codex

WORK EXPERIENCE

ALL MR ONLINE

Python Backend Engineer

Mumbai, MH

Aug 2024-present

- Developed Python/Selenium scraping pipelines for all 25 Indian High Court portals, converting CAPTCHA screenshots to base64 and routing them to Claude/Nebius multimodal APIs for inference, enabling collection of 1.5M+ legal documents.
- Built an asynchronous Python pipeline that processed 18M legal PDFs over 2 months, extracting text, generating LLM-based headnotes and metadata, and storing outputs in OpenSearch with checkpointing and error logging to prevent costly reruns.
- Built a FastAPI semantic search and RAG pipeline for 18M legal documents, combining Qdrant vector retrieval, OpenSearch metadata enrichment, and LLM-based intent recognition to answer plain-English legal queries for lawyers and legal professionals.
- Deployed and secured a self-hosted vLLM coding assistant on Vast.ai GPUs, enabling 5 developers to use OpenCode CLI over local SSH tunnels and reducing reliance on paid coding models by \$1,000+.
- Owned monthly Elasticsearch index maintenance across 4 production applications, corrected field-level data and pushed schema updates to keep records accurate at scale
- Built a production Flask API using Nebius AI to generate structured legal headnotes and headlines for 180–210 judgments per month, integrating outputs into an Angular editor workflow and reducing review time by 90%.

PROJECTS

Freelance Project | Python, FastAPI, ReactJS | dbplorg.com

Built and deployed a REST API backend for a local library management system using FastAPI and MongoDB, set up domain and HTTPS for a paying client

EDUCATION

University of Mumbai | May 2024

Masters of Computer Applications
