PROFESSIONAL SUMMARY

Backend Python Engineer with hands-on startup experience building data pipelines and LLM-based backend systems. Work spans large-scale document scraping, PDF processing, RAG pipeline development, Elasticsearch data workflows, and self-hosted LLM inference on GPU infrastructure. Used to owning backend features end to end with minimal oversight.

SKILLS

Languages: Python, Go

Backend: FastAPI, Flask, REST APIs, GraphQL

LLM Systems: Claude, Gemini, LLaMA, Qwen, RAG pipelines

Vector & Inference: ChromaDB, vLLM

Databases & Search: Elasticsearch, MongoDB, MySQL

Data & Scraping: Pandas, Selenium

Infra: Vast.ai GPU deployment, Linux/Ubuntu(SSH)

Tools: Git, cURL, Claude Code, OpenCode CLI, Codex

WORK EXPERIENCE

ALL MR ONLINE

Python Backend Engineer

Mumbai, MH

Aug 2024-present

LexAuthority - AI-Powered Legal Search Platform (Feb 2025 - Present) [Link](#)

- Unblocked scraping across Highcourt portals protected by CAPTCHAs by capturing screenshots via Selenium, sending base64 images to Nebius AI vision API for inference, and injecting responses programmatically to collect 1.5M+ legal documents
- Processed 18M PDFs across a 4-person team using an async Python pipeline (aiofiles + threading), routed documents to a self-hosted vLLM server to extract structured fields (party names, case numbers, dates, judges, headnotes) with error logging and resume support so no run started from scratch
- Built a semantic search API with FastAPI + ChromaDB that converted user queries into vectors and retrieved relevant documents via cosine similarity over AI-generated legal headnotes
- Deployed Qwen3-35B on Vast.ai (A100 80GB / RTX 6000) with vLLM, FP8 quantization, and 262K context length, secured the inference endpoint over SSH tunnel with key-based auth, and configured it as a shared dev endpoint for the entire team
- Owned monthly Elasticsearch index maintenance across 4 production applications, corrected field-level data and pushed schema updates to keep records accurate at scale
- Built a Flask API that runs LLM inference via Nebius AI to generate legal headnotes and headlines from raw text, integrated into an Angular frontend so editors could generate content in one click

PROJECTS

Freelance Project | Python, FastAPI, ReactJS | dbplorg.com

Built and deployed a REST API backend for a local library management system using FastAPI and MongoDB, set up domain and HTTPS for a paying client

EDUCATION

University of Mumbai | May 2024

Masters of Computer Applications
