PROFESSIONAL SUMMARY

Backend Python Engineer with hands-on startup experience building data pipelines and LLM-based backend systems. Work spans large-scale document scraping, PDF processing, RAG pipeline development, Elasticsearch data workflows, and self-hosted LLM inference on GPU infrastructure. Used to owning backend features end to end with minimal oversight.

SKILLS

Languages: Python, Go

Backend: FastAPI, Flask, REST APIs, GraphQL

LLM Systems: Claude, Gemini, LLaMA, Qwen, RAG pipelines

Vector & Inference: ChromaDB, vLLM

Databases & Search: Elasticsearch, MongoDB, MySQL

Data & Scraping: Pandas, Selenium

Infra: Vast.ai GPU deployment, Linux/Ubuntu(SSH)

Tools: Git, cURL, Claude Code, OpenCode CLI, Codex

WORK EXPERIENCE

ALL MR ONLINE

Python Backend Engineer

Mumbai, MH

Aug 2024-present

LexAuthority - AI-Powered Legal Search Platform (Feb 2025 - Present) [Link](#)

- Built a Selenium scraping pipeline collecting 1.5M+ documents from Highcourt portals — solved CAPTCHA barriers by integrating Nebius AI vision model API: capturing screenshots via Selenium, sending base64 encoded images for inference, and programmatically injecting responses to unblock navigation
- Built an async Python pipeline (aiofiles + threading) to process 200K+ PDFs — sent documents to a self-hosted vLLM inference server to extract structured fields (party names, case numbers, dates, judges, headnotes) with error logging and resume support
- Built a semantic search API using FastAPI + ChromaDB — converted user queries to vectors and retrieved relevant documents via cosine similarity search over AI-generated legal headnotes,
- Deployed Qwen3-35B on Vast.ai (A100 80GB / RTX 6000) using vLLM with FP8 quantization and 131K context length — secured inference endpoint via SSH tunnel with key-based auth; configured OpenCode CLI against the same endpoint for team-wide AI-assisted development
- Maintained and updated Elasticsearch indices — modified and corrected field-level data monthly to keep records accurate across 4 production applications .
- Built a Flask API that accepts text input, runs LLM inference via Nebius AI, and returns AI-generated headnotes and headlines — integrated into an Angular frontend for one-click content generation

PROJECTS

Freelance Project | Python, FastAPI, ReactJS | dbplorg.com

Built and deployed a REST API backend for a local library management system using FastAPI and MongoDB, set up domain and HTTPS for a paying client

EDUCATION

University of Mumbai | May 2024

Masters of Computer Applications
